| 2. T. JEYASRI | (953119104015) |
| 3. P. MARI SELVI | (953119104027) |
| 4. M. TAMIL SELVI | (953119104045) |

PROBLEM STATEMENT

- Phishing is a form of fraud in which the attacker tries to learn sensitive information such as login credentials or account information by sending as a reputable entity or person in email or other communication channels.
- A zero-hour threat is a severe threat that exploits the vulnerabilities of the system even before the developer himself discovers it.
- A faster detection approach is needed in this type as some fake webpages have a very short life span of 2–4 h.
- Solely, blacklist/whitelist methods are not sufficient enough for zero hour attack detection because of slower detection rate.
